

Microsoft Solution Assessment Program

Actionable Assessments to Support Your Journey in the Cloud

Today's new reality can be complex no matter where you're at in your cloud journey. Capitalizing on the shift to digital modernization is key to your organization's innovation and growth, but it can be daunting knowing where to start for any scenario.

Microsoft's Solution Assessments are personalized, Microsoft-funded programs* that utilize modern tools to collect a customer's data estate, analyze the deployed environment and provide insights for recommendations. Each assessment will help determine actionable steps for digital transformations, cloud migrations and process improvement. Solution Assessments harness the power of technology for continued business success—stability, productivity, innovation, growth that will define your organization's future.

Assessments to Meet Your Organization's Needs

Microsoft Solution Assessments will reflect insights specific to your organization, your infrastructure, and your requirements. You choose the best assessment type to align with your business priorities.

ARE YOU LOOKING TO PLAN A CLOUD MIGRATION?

Your successful business strategy requires in-depth understanding of the opportunities available to improve productivity, reduce costs, and optimize investments. Solution Assessments utilize cutting edge tools to review your current business landscape, analyze your data estate, and provide actionable, data-backed recommendations.

ARE YOU LOOKING TO INCREASE SECURITY PROTOCOLS?

Cyber security is top of mind for CTOs, CIOs, and business leaders in every industry. The threat of cyber-attacks is an ever-changing landscape and requires proactive mitigation planning. The impacts of a cyber hack can be devastating to customer trust and potential for significant business revenue loss.

ARE YOU LOOKING TO VALIDATE INTERNAL BUSINESS INVESTMENT?

Your successful business strategy requires in-depth understanding of the opportunities available to improve productivity, reduce costs, and optimize investments. Microsoft Solution Assessments provides customers with detailed analysis based on real time data to understand total cost of ownership, and cost savings.

Microsoft Solution Assessment Programs

As a Managed, Microsoft Solution Partner, Protiviti is uniquely qualified to deliver Microsoft-funded* Solution Assessments to eligible organizations. The actionable assessments are designed to meet your organization where you are on your journey to meet your business needs. Each assessment is led by Protiviti, Microsoft and your team. Together, we will move through our four-phase approach to delivering the business insights you need.

Azure Foundations Assessment

The Azure Foundations Assessment helps customers plan their move to the cloud with confidence. The Assessment provides a broad datacenter assessment to identify and prioritize cloud-ready workloads with Azure cost estimates, based on Cloud Adoption Framework (CAF).

Azure Migration Engagement

The Azure Migration Engagement helps customers take the first step in their migration. The Engagement delivers an in-depth analysis of a targeted workload or application, complete with a reference architecture and a migration plan to support the move to Azure

Azure App Innovation Engagement

Aging systems and legacy applications cannot take full advantage of today's customer-centric technologies, like cloud and mobile computing. The engagement helps organizations migrate and modernize their applications to the cloud through a consultative engagement.

Data Platform Engagement

Modernize the data estate in Azure complete with production ready proof-of-concept, and hands-on skilling to show the power of data in Azure. Customers will receive architecture design recommendations for their data estate and deploy an ADS environment.

Modern Workplace Assessment

This assessment helps customers understand the collaboration tools and technology available for improving productivity. This analysis will help maximize the value of investments by identifying opportunities to reduce duplicative costs.

Cloud Security Assessment

This assessment provides a comprehensive look at the cybersecurity infrastructure, including current software deployment and usage, and deliver key insights to help establish the right processes for cyber-risk reduction in the cloud.

Application & Database Modernization Assessment

This assessment identifies and prioritizes applications for cloud modernization. The organization will receive an in-depth identification and analysis of a specific application for migration to Azure complete with business case, architecture design, and migration plan.
