

# UiPath Test Suite For The S/4HANA Journey

## Revolutionize Testing Leveraging Your UiPath Platform

Application testing today consists of manual repetitive processes that drain resources and require significant maintenance. Modernizing your testing program to become a value-driver for the business can help:

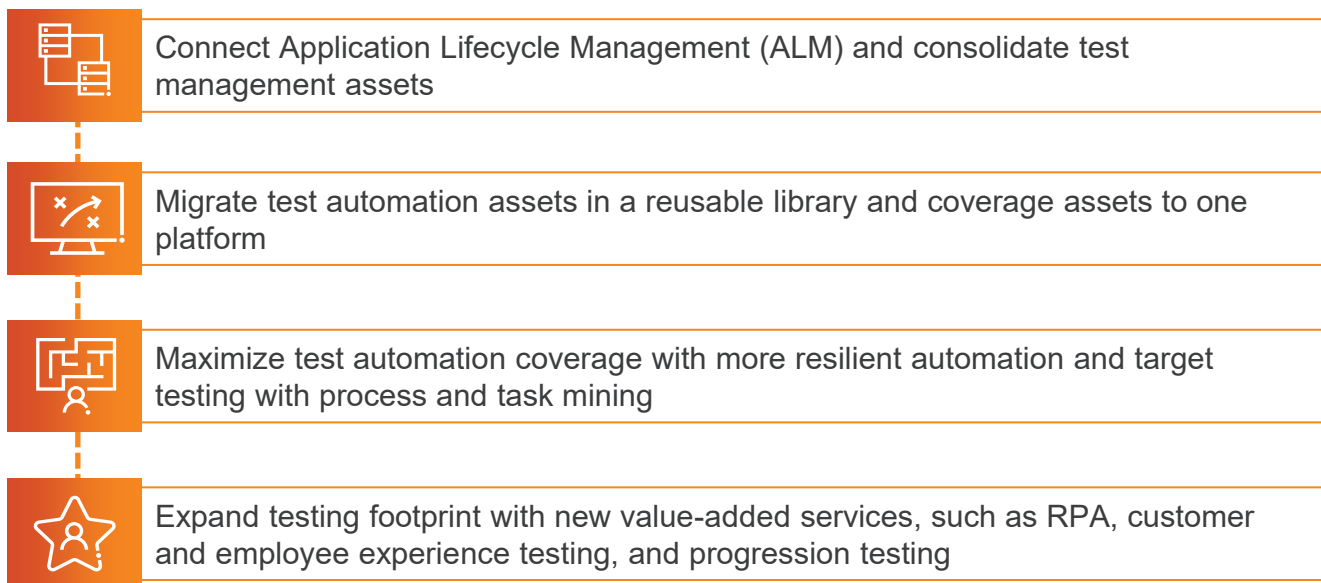

- Reduce costs
- Increase end-user productivity
- Achieve significant automation coverage
- Decrease testing time

Today, companies are *allocating 30% of their SAP budget to testing and 72% of SAP customers still depend on manual testing to uncover critical defects<sup>1</sup>*.

Although QA testing incorporates a range of tools, these tools often lack versatility and the potential for repurposing. Consequently, automation and digital transformation resources and budgets become strained or minimized. Protiviti can equip you with the tools and expertise to empower your workforce and unlock the operational efficiency needed to move your business forward.

Reduce costs  
up to  
**40%**  
with automated  
testing<sup>1</sup>

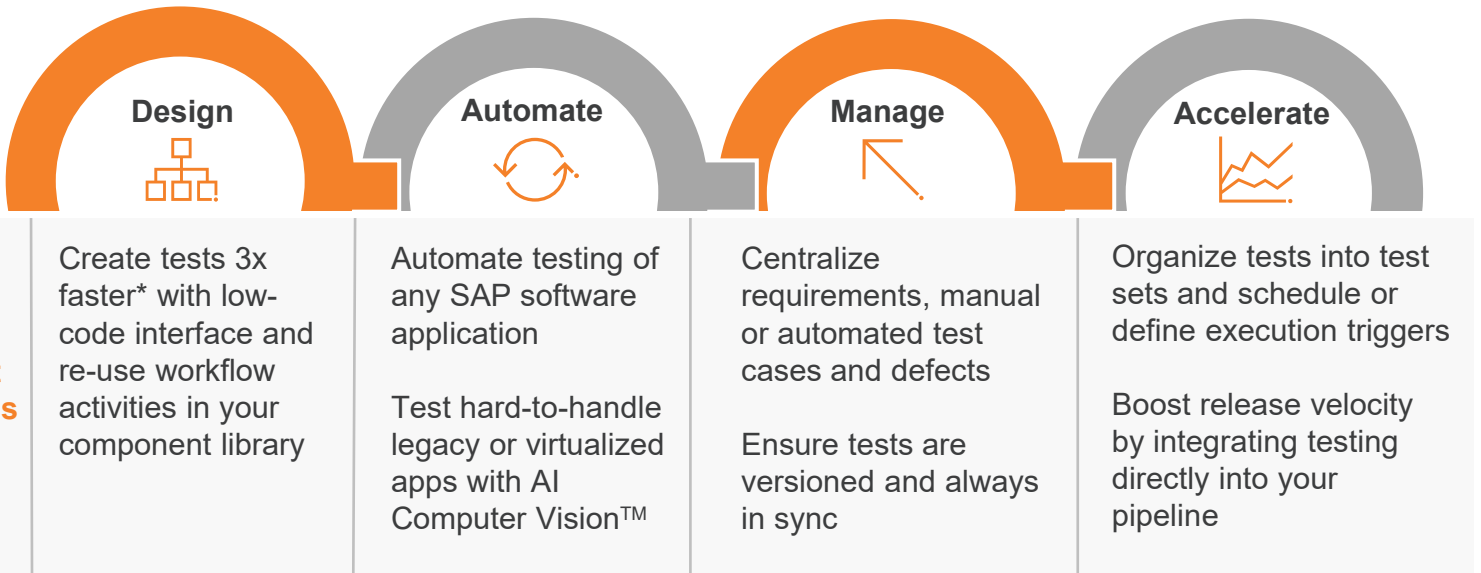

### Empower teams and transform testing with automation and AI power tools
